Dear NRES Committee East Midlands and Trent CLRN

I am contacting you on behalf of Professor Philip Bath, the Chief Investigator for the above referenced study, entitled :

Prevention of Decline in Cognition After Stroke Trial (PODCAST): A factorial randomised trial of Intensive versus guideline lowering of blood pressure and lipids.

The current trial end date is 31st August 2014, however, we would like to extend this until the 31st October 2014, to allow for a further 2 months of follow up.

I have just discussed this amendment with one of the REC Managers, who checked the system to see when our next annual report was due, so as to include this update within that report, however, the next one is not due until August 2014.

We would therefore like to submit this as a minor amendment.

Please let us know if you require any further information.

Kind Regards

Hayley Foster
